

Alberta Clipper (Line 67) Expansion

North America needs reliable and secure transportation of petroleum supplies. Refineries in the U.S. Midwest and surrounding regions rely on crude oil transported by Enbridge Energy Limited Partnership's Line 67, a 36-inch diameter crude oil pipeline that spans from North Dakota through Minnesota to Superior, Wisconsin.

Line 67 has been operating since 2010. Enbridge increased the capacity of Line 67, outside of a three-mile U.S./ Canada border segment, to 800,000 barrels per day (bpd) by adding and modifying pump stations in 2014 and 2015.

Permitting

In November 2012, Enbridge filed an application for a Presidential Permit with the U.S. Department of State (DOS) to authorize Enbridge to transport 800,000 bpd on the existing three-mile segment of the Line 67 pipeline that crosses the international border. On February 10, 2017, the DOS opened a public comment period on the Draft

Supplemental Environmental Impact Statement (SEIS) for Enbridge's Alberta Clipper (Line 67) Expansion. The Draft SEIS was prepared by DOS as part of its review of Enbridge's Presidential Permit application, which seeks authorization to transport 800,000 bpd on the existing, three-mile border segment of the Line 67 pipeline.

The Draft SEIS concluded that there are no significant adverse environmental impacts associated with this project.

More information on pipelines and how they operate and are regulated is available at www.pipeline101.org.

Pump Stations

Pump stations play a vital role in moving crude oil through the Enbridge pipeline system. Pump stations contain one or more electrically driven pumping units, strategically located along the pipeline route to maintain the flow and keep it within safe operating limits.

Project Benefits

- Maintaining access to secure and reliable supplies of North American crude oil, moving the U.S. closer to energy independence.
- Reducing the nation's reliance on imports from nations that are less stable or unfriendly to U.S. interests.
- Ensuring refineries in the U.S. Midwest and surrounding areas continue to get the oil needed to satisfy public demand for petroleum products.
- Continuing to generate millions of dollars of tax revenue for communities along the pipeline route that provide funding for schools, roads and other community needs.
